

IMAD UD DIN

Senior Full-Stack Developer · Operations & Field-Service Platforms

[LinkedIn](#) · [GitHub](#) · [Mail](#) · [Whatsapp](#)

PROFILE

Full-stack developer with five years of building operations software for businesses that run on physical things — inspections, inventory, logistics, dealerships and field teams. Frequently, the sole engineer on production systems, owning architecture, database design, payments and deployment end to end. Delivered for clients in the UK, USA, Australia, Italy, Saudi Arabia, UAE and Pakistan. Core stack: Next.js, NestJS, PostgreSQL, React Native and Electron.

SELECTED WORK

Optima.AI — AI-Powered Health Testing Platform

Nov 2024 – Dec 2025

United Kingdom (Remote) · via Labverse · Sole developer · Next.js App Router, Supabase, Stripe, LLM pipelines, Vercel

optimatesting.co.uk

- Built and shipped the entire platform single-handedly: at-home test-kit e-commerce, lab result ingestion, and an LLM pipeline producing personalised, downloadable health reports.
- Designed a multi-tenant subdomain architecture now serving 11 partner organisations, each with its own branded storefront and admin dashboard — roughly 300 test-kit listings across partner and main domains.
- Implemented Stripe checkout and subscription billing, multi-tiered authentication, real-time notifications and the full relational schema on Supabase.
- Still retained by the client for ongoing maintenance work.

CDI Tech — Industrial Inspection & Field Operations Suite

Dec 2023 – Feb 2025

USA (Remote) · via Labverse · NestJS, PostgreSQL, Vite React/TypeScript, React Native, Google Maps/Earth, Stripe

- Full-stack developer across three products of a connected inspection platform: Utility Point (browser), Station Point (desktop) and Inspection Point Lite (mobile companion).
- Inherited a legacy codebase and redesigned the database schema end to end, measurably reducing lag and defect rates.
- Built automated geospatial routing over Google Maps/Earth, computing optimised daily itineraries for field engineers.
- Implemented full-duplex WebSocket messaging connecting clients, inspectors and administrators.
- Engagement closed following the client owner's death.

Mills ERP — Double-Entry Accounting & Inventory (Desktop)

Sep 2024 – May 2025

Pakistan / Italy · via Labverse · Electron, NestJS, Vite React, Redux, TypeScript, React Native

- Built a full double-entry accounting core — ledgers, dynamic invoicing and cash-flow reporting to professional accounting standards.
- Designed multi-warehouse inventory schemas tracking raw materials, warehouse movements and shipment arrivals in real time; packaged as native cross-platform desktop software.
- In daily production use at two large mills — Amir Rice Mill and Ok Flour Mill (Kamoke, Gujranwala) — with further installations under negotiation.
- Delivered the owner-facing React Native companion app (Feb – May 2025): live inventory dashboards, interactive analytics, truck tracking on Google Maps via WebSocket GPS streams, and push alerts for shipments and low stock.

MatMate — Industrial Procurement & Logistics Platform

Jan 2026 – Present

Saudi Arabia · via Africa House Pakistan · NestJS, PostgreSQL, React Native, WebSockets, Google Maps

- Building a multi-role React Native application (Admin, Seller, Driver, Buyer) with full multi-language support, push notifications and an integrated transactional email system.
- Developed live driver tracking — GPS streamed over WebSockets from driver apps to procurement dashboards, with Google Maps routing and geofenced status updates.
- Designed the real-time auction and bidding engine with automated winner selection; tuned multi-tenant PostgreSQL queries to sub-100 ms responses.
- MVP complete; iOS and Android store releases in progress.

Car Inventory & Financial Management Platform (Desktop)

Oct 2025 – Mar 2026

Pakistan · via Africa House Pakistan · Electron, NestJS, Vite React, TypeScript, Chart.js

- Delivered a cross-platform Electron desktop system for car dealerships covering vehicle inventory, purchase and sale ledgers, installment plans and profit analytics.
- Built reporting dashboards with Chart.js visualisations for cash flow, stock aging and receivables.
- In daily use at 8 dealerships across Pakistan handling high-value vehicle inventory; white-labelled under each dealership's own brand.

CYORN — Cyberthreat Profiling B2B SaaS

Mar 2025 – Feb 2026

Sydney, Australia (Remote) · via Labverse · React, Python, AWS Cognito, DynamoDB, Stripe, Figma

tp.cyorn.com

- Designed high-fidelity Figma prototypes and delivered them as secure React client portals with Stripe subscription billing.
- Integrated AWS Cognito MFA with temporary QR-code flows entirely client-side, removing backend overhead.
- Built the Python engine that scores organizational network data for cyberthreat exposure; acted as sole engineering contact for Australian compliance requirements.

ALSO DELIVERED

- **Usee-360** (usee360.com) — Dubai Prop Tech platform — 360° virtual property walkthroughs, in-app video conferencing and the super-admin portal managing agents, listings and permissions. React, MUI, Google Maps. Feb 2023 – Sep 2024.
- **Inspection Mentoring (IIM)** (inspectionmentoring.com) — US e-learning SaaS where certified inspection mentors monetize lecture libraries. Sole developer: Stripe subscriptions, video hosting with auto-resume playback, passwordless OAuth onboarding, automated certificate generation. Apr – Sep 2025.
- **Pick My Booking** (pickmybooking.com) — Travel experiences, e-visa and insurance platform. Brought in through Labverse as emergency frontend cover after the lead agency lost its frontend developer; delivered the production frontend in six weeks. Frontend only — the platform is credited to the lead agency. Jun – Sep 2025.
- **MedBillings** — Medical services platform taken from brief to production in under seven days, converting directly into a longer engagement.
- **Labverse** (labverse.org) — Designed and built the company's own website.

EMPLOYMENT

Africa House Pakistan — Full-Stack Developer

Oct 2025 – Present

Lahore, Pakistan (onsite) · Up to 3 concurrent products

Labverse — Full-Stack Developer

January 2022 – Oct 2025

Client project delivery · Regularly ran 4 concurrent client projects

Under the terms of my Labverse contract, I continued to own Optima.AI and CYORN through to completion after moving to Africa House Pakistan.

TECHNICAL SKILLS

Frontend Next.js (SSR / ISR / SEO), React, Vite, TypeScript, Redux Toolkit, Tailwind CSS, MUI, Figma

Mobile & Desktop React Native (multi-language, push notifications, live GPS tracking), Electron

Backend NestJS, Node.js / Express, microservices, gRPC / HTTP2, WebSockets, REST & GraphQL APIs, Python

Data & Cloud PostgreSQL, Supabase, MongoDB, DynamoDB, AWS (EC2, S3, SES, Cognito), Vercel, Docker, CI/CD

Payments Stripe (subscriptions, checkout, billing recovery), Shopify GraphQL Admin API

Practices Agile / Scrum, Jest, Jira, Confluence, direct client-facing delivery
